

(Body Text, 16, Bold, Center) Capstone Project Final Report for the Project *Project Title*, from Error! Reference source not found., to Error! Reference source not found.

1. Introduction (Heading 1)

You may adopt this document and its style for your Capstone Project Final Report. Otherwise you may use any sensible report format, as long as you obey the restrictions outlined.

(Body Text) Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nullam commodo neque et nisl maximus, ac fermentum elit efficitur. In accumsan fringilla laoreet. Nam non tristique nisl. Pellentesque rhoncus luctus libero, vitae finibus felis mattis vel. Quisque pharetra, dolor sit amet molestie consectetur, orci ipsum pellentesque urna, eget tempus ligula purus ac turpis. Aliquam vel risus magna. Duis eu venenatis leo, ac vehicula velit. Aenean at vehicula dolor. Aenean non libero a leo tempor facilisis vel a tortor. Sed sed sem urna. Ut eu nisl risus. Aliquam erat volutpat. Vestibulum neque est, maximus a pharetra eu, elementum at augue. Praesent tristique, augue eu aliquam commodo, erat augue molestie neque, commodo ultricies metus metus eget est.

2. General Guidelines

For your Capstone Project Final Report, you should present in detail the technical complexities of the project undertaken, including, such as, but not limited to, e.g., the problem identification, the approach and design, the implementation of the solution, and the testing and evaluation conducted. The report should allow readers to understand, among other things, and where applicable

- What is the project about, including its complexity and industry relevance;
- What have you planned to / was tasked to accomplish;
- What have you actually accomplished;
- What are the future works, including roadmap and plans, if any;
- What are the relevant literature, documentation, codebase, etc. (i.e., background research);
- Requirements gathered;
- Implementation details;
- Test approaches, and test cases;
- Technical challenges that were present, and how did you address them;
- Knowledge gained in classroom that you applied into the project, and where;
- Knowledge beyond the classroom that you utilized, and where in the project; and
- Other notable challenges, incidents, issues, and how you handled them

The reader of this report may not have had any prior contact with your company or project, so the report should include any background information required to understand the project, including domain knowledge, specialised terminology, and any other information that may not be familiar to an ordinary member of the relevant computing discipline.

Keep in mind that you will be assessed based on the **seven (7) assessment domains** of the capstone project. You should therefore strive to highlight such aspects in your final

report. Additionally, this report forms the basis for assessing the “Written Communication and Reports” domain.

The domains of assessment for ICT4001 Capstone Project are depicted in **Figure 1** below, while **Table 2-A** gives an overview of each of these assessment domains.

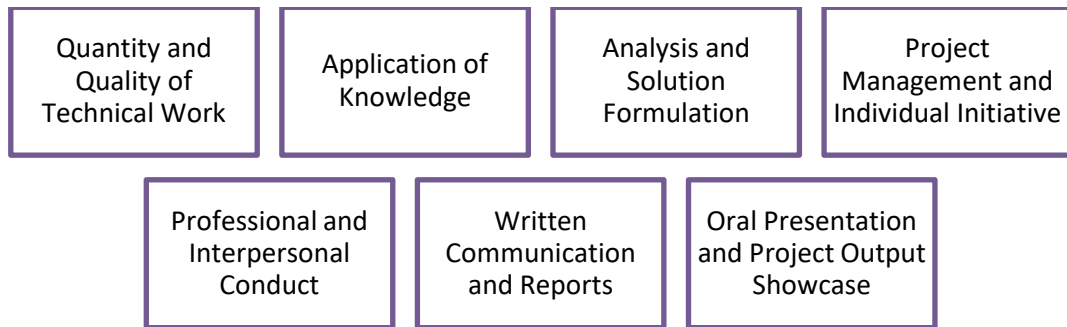

Figure 1: ICT4001 Capstone Project Assessment Domains (Caption (San Serif))

Table 2-A: Capstone Project Assessment Domain Description (Body Text, Bold)

Domain	Description
Quantity and Quality of Technical Work	Candidates are expected to complete a capstone project that is of reasonable complexity, industry relevance, and that allows scope for the candidate to demonstrate the various aspects of software engineering and information security.
Application of Knowledge	Candidates are expected to utilize knowledge gained in the classroom, both across a spectrum of modules, as well as in depth within modules to complete their project, in addition to utilizing knowledge beyond the classroom to do so.
Analysis and Solution Formulation	Candidates are expected to analyse existing works, and, combined with analysis of the project problem, propose appropriate, detailed approaches and solutions to the problem.
Project Management and Individual Initiative	Candidates are expected to practise appropriate time and resource management, and to take initiative and ownership of their project.
Professional and Interpersonal Conduct	Candidates are expected to keep in contact with their assigned Academic Supervisor and demonstrate strong professionalism in completing their project.
Written Communication and Reports	Candidates are expected to demonstrate written communication skills via progress reports at the end of every intermediate trimester, building up to a final project report at the end of the project.
Oral Presentation and Project Output Showcase	Candidates are expected to demonstrate effective technical presentation skills through the preparation and delivery of a project presentation, and optionally demonstration of the completed works.

There are no mandatory or required sections within the Capstone Project Final Report, however you may want to consider sectioning your report based on the bullet list earlier. Otherwise, you may include any contents deemed appropriate at your own discretion. Your report, however, **must not exceed 25000 words**, excluding appendices.

If you are tasked to work mainly on your Capstone Project for your IWSP, your IWSP Status Report and Capstone Project Final Report may contain similar subject matter, **subject to your academic supervisor's approval**. Do note that the assessment domains and criteria for both ICT4001 Capstone Project and ICT4002 Integrated Work Study Programme are quite different, hence you should tailor your reports accordingly in such situation.

Some other tips in writing your Capstone Project Final Report:

- If you have been regularly keeping project logs, those logs can serve as a base and repository of contents for you to write your report.
- Do not merely submit a compilation of logs as-is; think through what you want to write and submit, and ensure that there is some flow in the report.
- Your report must be complete even without appendices, which means it should contain all necessary information, diagrams, figures, tables, charts, etc.
- Do not exceed the word limit; the word limit does not include diagrams, figures, and tables, however do not use that as justification to flood your report with such elements beyond what is required to write a complete report.
- Do not abuse the appendices by dumping contents there; appendices are considered subsidiary contents, and readers may choose to refer to them.
- Ensure that you have your organization and industry supervisor's clearance to release the report to your academic supervisor and nominated examiner.
